StemRad is personal protective equipment (PPE) technology company that has created a wearable vest to protect people from harmful gamma radiation. Based on extensive scientific research, this shield is structured to protect the most prone areas to radiation using an ergonomical structure for optimal comfort and mobility. The target users are emergency/first responders, nuclear workers, and military/defense personnel. The StemRad shield will be tested by NASA on its next mission, Exploration Mission-1 (EM1) to measure radiation exposure in space.
