

WizeCare Technologies partners with Virtual Health PT to bring remote Physical Medicine/Rehabilitation prevention and treatment services for Workplaces

WizeCare developed state-of-the-art solutions for remote Physical Rehabilitation, leveraging the power of AI, big data analysis, computer vision, and machine learning to produce personalized care plans, addressing chronic pain, and post-surgery rehabilitation

Hartford, Connecticut / January 30, 2021 – [WizeCare](#), the digital health and remote care startup and [Virtual health PT](#), a leader in telemedicine providing physical therapy to companies across the United States, today announces the launch of a new partnership and a country-wide service of Clinical MSK care for Workplaces and their employees. The solution is designed to help employers improve employees' well-being, prevent MSK related syndromes, and help boost their post op rehabilitation outcomes while dramatically shorten the recovery time.

WizeCare's and VHPT's holistic enterprise-Health offering will provide businesses a cost-effective remote solution to better engage, treat and track their employees' health, using AI capabilities with the monitoring of qualified and experienced clinicians and Health coaches. This partnership will benefit organizations and employers by providing a critical added value to their employees, creating a healthier and safer workplace, and significantly improved workforce productivity. The new tele-rehab service helps prevent physical injuries and claims, resulting directly from the employees' primary occupation, and reducing employee healthcare costs.

Musculoskeletal disorders (MSDs) are the leading cause of work disability, sickness absence from work, 'presenteeism', and productivity loss across all the US. The total estimated cost of lost productivity attributable to MSDs among working-age people in the US could be as high as 2% of gross domestic product (GDP).

"We are excited to accelerate companies and organizations' well-being and health through this partnership with VHPT," WizeCare Technologies CEO, Roy Shteren, says today. "The solution we offer to organizations and workplaces is nothing but a revolution, based on AI and ML capabilities to provide tailor-made prevention & care programs to employees, anywhere, anytime. The high professional and years of experience VHPT bringing to this partnership enable us to offer these attractive, high-value services to employers and their employees while saving millions of dollars a year in cost reduction.

ABOUT

[WizeCare Technologies](#) is a digital health company that has developed a unique solution for remote Physical therapy at the patients' homes.

WizeCare's HIPAA compliant product enables healthcare providers to deliver

intelligent, accessible, and exciting physical therapy sessions directly to their patients' homes.

WizeCare has developed the revolutionary MoveAI™ technology (patent pending), which seamlessly identifies, tracks, and analyzes patient movement during the home session without the need of any sensors, wearables, or depth cameras, providing the patients with immediate feedback & guidance:

<https://www.youtube.com/watch?v=CUpLHupRuzY&feature=youtu.be>

WizeCare's solution has already crossed the 25,000 active patients' bar. It is clinically proven for CJR and Parkinson cases through 2 successful clinical studies showing better clinical outcomes and patients' adherence for home use compared to the conventional face to face physical therapy model.

[Virtual Health PT](#) is a leader in telemedicine providing physical therapy to companies across the United States. Its mission is to provide care and Physical Therapy for patients at the comfort of their own home or office and to deliver a high quality of care in a more immediate timeframe leading to appreciative, more productive and healthier employees, thereby benefitting the patients as well as the organizations.
